LAND AREAS AND DENSITIES  
OF STATISTICAL UNITS

## Géographie

SUPERFICIES ET DENSITÉS  
DES UNITÉS STATISTIQUES

## INTRODUCTION

Area measurements have been published for a long time in regular census reports. This is the first census where an expanded version of area and densities is published in a special report.

Area measurements all apply to June 1, 1971. The concept is that of LAND AREA: water bodies were excluded as much as is feasible. Most of the measurements were effected by planimeter except in the Prairie Provinces. The scales used were generally 1:50,000 in the Eastern Provinces and 1:250,000 in the Western Provinces. In sparsely populated areas, smaller scale maps were used.

The statistical units for which area measurements and densities are published in this report are:

Table 1: provinces and census divisions

Table 2: census divisions and census subdivisions: municipalities; incorporated cities, towns and villages; unorganized; Indian reserves having population

Table 3: components of census metropolitan areas

Table 4: components of census agglomerations 25,000 and over in population

Table 5: census tracts

Table 6: area changes in census divisions, 1966-1971

Numerous census division totals have been modified from the figures published in 1966, Volume 1, Table 2. This is due to several factors, such as better maps, different scales on which measurements took place, changes in census division boundaries, method of compiling census division totals. Table 6 of the present report provides absolute land area measurements for those census divisions which have had boundary changes in the period 1966-1971; hence, census division totals of Table 1 can be reconciled with 1966 totals.

THE CENSUS OF CANADA PROVIDES UNOFFICIAL LAND AREA MEASUREMENTS ONLY, which are necessary in the calculation of densities. Since the planimeter was not used in establishing area measurements in the Prairies, road allowances are not accounted for in these three provinces.

Depuis bien des années on publie les mesures des superficies dans la série normale des bulletins du recensement. Pour la première fois, une version amplifiée des superficies et des densités du dernier recensement fait l'objet d'une publication spéciale.

Les mesures des superficies ont été établies au premier juin 1971. Le principe repose sur celui de la SUPERFICIE EN TERRE: les étendues d'eau sont exclues dans toute la mesure du possible. La plupart des mesures ont été faites au moyen du planimètre sauf dans les provinces des Prairies. En règle générale, on a adopté l'échelle de 1:50,000 dans les provinces de l'Est et celle de 1:250,000 dans les provinces de l'Ouest. Dans les régions à faible densité de population, on a adopté une échelle plus petite.

Les unités statistiques dont les mesures de superficie et de densité paraissent dans ce bulletin sont les suivantes:

Tableau 1: provinces et divisions de recensement

Tableau 2: divisions et subdivisions de recensement: municipalités; cités, villes et villages constitués; superficies non municipalisées; réserves indiennes ayant une population

Tableau 3: composantes des régions métropolitaines de recensement

Tableau 4: composantes des agglomérations de recensement ayant une population de 25,000 habitants et plus

Tableau 5: secteurs de recensement

Tableau 6: changement de superficies dans les divisions de recensement, 1966-1971

De nombreux totaux des divisions de recensement ont été modifiés par rapport aux chiffres de 1966, volume 1, tableau 2. Cela tient à plusieurs facteurs notamment à l'amélioration des cartes, à l'utilisation d'échelles différentes pour effectuer les mesures, aux changements de limites entre les divisions de recensement, à la méthode de calcul des totaux des divisions de recensement. Le tableau 6 du bulletin donne une mesure absolue des superficies en terre pour les divisions de recensement dont on a modifié les limites entre 1966 et 1971; dès lors, on peut faire concorder les totaux des divisions de recensement du tableau 1 avec les totaux de 1966.

LES MESURES DES SUPERFICIES EN TERRE DU RECENSEMENT DU CANADA NE SONT PAS OFFICIELLES et servent au calcul des densités. Du fait qu'on n'a pas utilisé le planimètre lors des mesures des superficies dans les Prairies, les mesures des routes n'ont pas été comptées dans ces trois provinces.

(1) + indicates increase; — indicates decrease. For example, census division No. 1 in Newfoundland has increased by 24.77 square miles since 1966. — + signifie augmentation; — signifie diminution. Par exemple, la division de recensement n° 1 de Terre-Neuve a subi une augmentation de 24.77 milles carrés depuis 1966.

(2) Comparisons are not possible as census divisions have increased from 10-29. — Les comparaisons ne sont plus possibles car le nombre de divisions de recensement est passé de 10 à 29.
